

VERITAS NETBACKUP™ SELF SERVICE

MAKE BACKUP SIMPLE AGAIN

VERITAS

Empower your IT operations person, your application owners and even your individual business users with an easy-to-use web portal to perform backup and restore jobs independently on their own without having to pick up the phone or join the queue at your help desk.

Your backup team defines the catalog of backup and recovery policies and comprehensive automated workflows to enforce standards and ensure frictionless governance that lets you sleep at night.

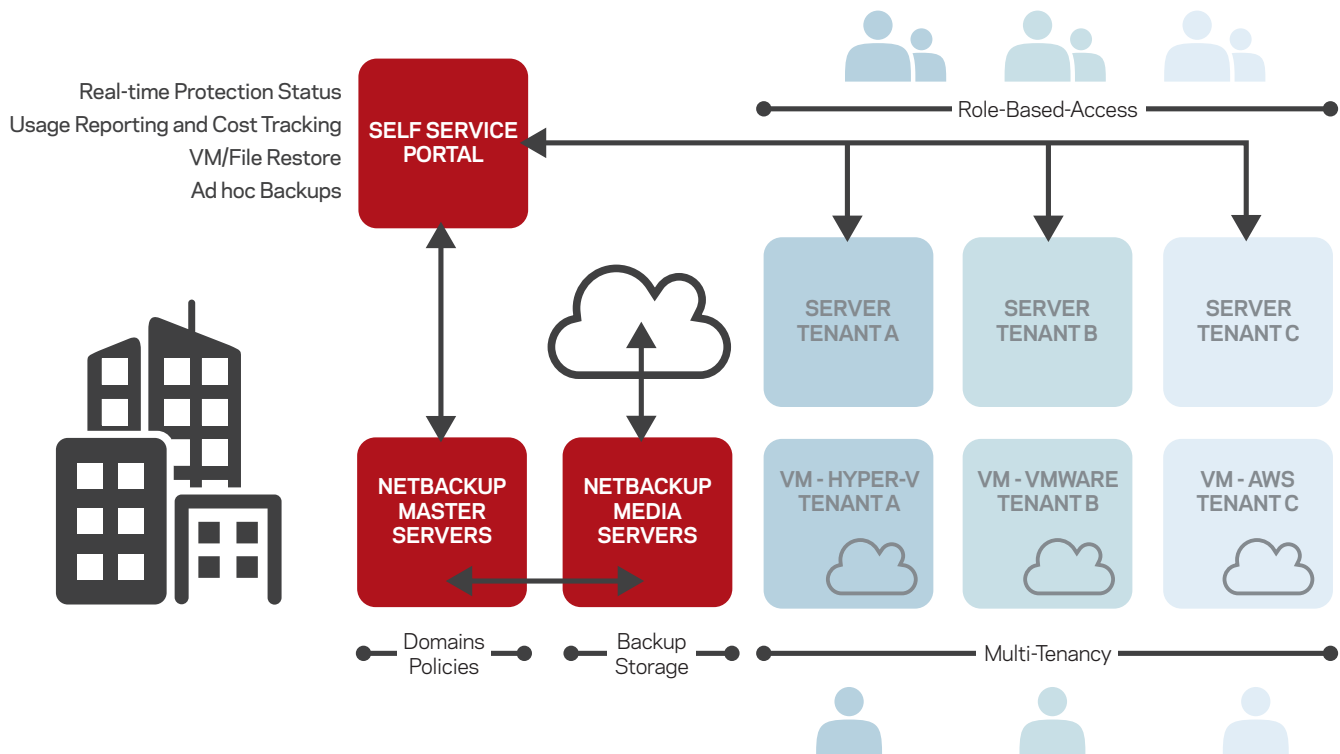

UNLOCK AGILITY AND BOOST PRODUCTIVITY

Enabling your organization with on-demand access to backup copies and push-button recovery removes the delays and manual routine work of your existing processes. Because you define the role-based access controls and policy-based options available to each individual user or group, you are in complete control.

WHY NETBACKUP SELF SERVICE?

- Unlock agility and boost employee productivity
- Consolidate backup tools and reduce complexity
- Increase efficiency and eliminate manual jobs
- Drive down costs with multi-tenancy and automation
- Enforce standards and reduce risks with policy-based controls

HOW IT WORKS?

INCREASE EFFICIENCIES

Automating the workflow of common backup and recovery requests and processes allows your teams to reduce time-consuming routine operations, while improving user satisfaction with the self-service portal. Automatic discovery and registration of new servers and virtual machines helps you to shorten setup time and mitigate the risk of unprotected servers

DRIVE DOWN COSTS

The multi-tenancy option can help you maximize utilization of your infrastructure and storage resources. Combining that with automated policies that guide for example retention schedule and storage tier choices, provides you the opportunity to balance service level objectives, compliance requirements and spend.

Cost tracking and proactive notification options in the self-service portal can deliver educational benefits to your users and potentially change their behavior and drive down waste.

NETBACKUP SELF SERVICE FEATURE LIST

- Easy-to-use customizable portal
- Integration with ITSM, Cloud Management Platforms and more
- Catalog with automated workflows and policies
- Role-based access
- Multi-tenancy
- Policy-based user options
- Define and maintain backup schedules
- Define and maintain backup policies
- On-demand backup
- On-demand restore of Files/ Virtual Machines
- Dashboard with real-time protection and restoration status
- Automatic discovery and protection of new servers and virtual machines
- On-demand usage and cost reporting and tracking
- Usage thresholds alerts
- Integration with enterprise directory services

COMPLETE VISIBILITY AND CONTROL

You maintain a centralized service catalog for all backup and recovery workflows and policies, so you are confident to meet your corporate compliance guidelines.

You can create users with different levels of access. There are predefined sets of user roles available that you can customize to your specific needs. These roles can then be assigned to individual users or groups according to your organization's security policies. Or, simply extend your corporate user controls and policies to the self-service portal by integrating your existing LDAP or Active Directory servers. This way you maintain one central user administration.

You have real-time access to reporting on all aspects of your backup and recovery environment from usage reporting, cost tracking to a dashboard with actual protection level status.

GETTING STARTED IS EASY

Starting with NetBackup Self Service is easy. There are absolutely no modifications required to your existing NetBackup environment. What you need is two servers or virtual machines; one for the web portal and one for the Microsoft SQL database. From here you simply use the portal to administer your users and policies.

Save time in your evaluation by requesting a complimentary free trial by completing a simple registration form and we'll help you to get started quickly. [▶ Start Today](#)
